

Aria412

Executive Summary

April 24, 2026

Name of Client Representative

Desirée Soteres

Student Consulting Team

Biplop Ghimire, Joon Kwon, Ryan Wang

Background

Aria412 is a 501(c)(3) nonprofit opera company founded in Pittsburgh, Pennsylvania, in 2017 by soprano Desirée Soteres. Its mission is to make opera and classical music accessible—artistically, financially, and socially—to the full Pittsburgh community. The organization produces nine to eleven free concerts per year in non-traditional venues such as Hop Farm Brewing Company and Rodef Shalom Congregation. Aria412 functions as a one-person organization: Desirée serves as artistic director, administrator, and sole operator of every digital tool, with no technical staff and a limited operating budget. Its technology stack consists of a Wix website, Constant Contact for email marketing, and OnTheStage for ticketing.

Project Description

Project Opportunity

Aria412 entered this engagement with strong artistic output and weak digital reach. Baseline analytics in February 2026 showed 121 monthly sessions and only 27 clicks from Google search. Alt text was missing on 84 images, meta descriptions were absent on every page except the home page, and three tools, Wix, Constant Contact, and OnTheStage, ran in parallel with no integration, requiring Desirée to manually reconcile contact data after every event. The opportunity was to make Aria412 findable by Pittsburgh audiences, which it was not yet reaching, and to eliminate the manual operational burden on Desirée.

Project Vision

The project's vision was to give Aria412 the discoverability of a digitally mature arts organization within the constraints of a one-person nonprofit. Every change had to live inside existing tools, be maintainable by a non-technical operator, and outlast the team's involvement. The solution package addressed those conditions through three components: a search-discoverability rebuild, a marketing-automation integration, and a long-term capacity package built around Desirée's actual constraints.

Project Outcomes

Before the project, Aria412 was invisible in non-branded search; queries like "opera in Pittsburgh" and "local opera in Pittsburgh" returned no position for the site. After Phase 1, "opera in Pittsburgh" reached an average position of 27.9. After Phase 2, it improved to an

average position of 17.9 with 5 clicks, and Aria412 now appears in Google's AI Overview alongside Pittsburgh Opera and Pittsburgh Festival Opera. All 84 images received keyword-optimized alt text; meta descriptions were applied to every page. Valid JSONLD Schemas like PerformingGroup, Website, and Event structured data were implemented with zero errors. A FAQ page with Schema.org FAQ Page markup now targets long-tail searches in Pittsburgh. The Wix–Constant Contact integration is live, automatically routing form submissions to the correct audience list. A Google Business Profile was verified at 5601 Butler Street, and a Google for Nonprofits account was approved with Ad Grant activation pending.

Project Deliverables

Deliverables include: Improved and updated website with all changes implemented and published; a page-by-page SEO Optimization Guide; an SEO Image Plan workbook for all 84 images; a live FAQ page at aria412pgh.com/faq; the active Wix–Constant Contact integration; two custom Gemini Gems (an Image Text Generator and an Event Schema Generator) enabling Desirée to maintain SEO independently; a verified Google Business Profile; a configured Google Search Console property; a Handoff Documentation Guide; and a Troubleshooting Runbook. All materials are stored in a Google Drive folder owned by aria412pgh@gmail.com.

Recommendations

The team's primary recommendation is to activate the Google Ad Grant upon Google Ad grant approval, providing up to \$10,000 per month in free Search Ads at zero cost. The team also recommends expanding the FAQ page quarterly to compound organic search reach and using both Gemini Gems consistently when uploading images and creating event pages. For a future student team, building a lightweight analytics dashboard connecting Google Search Console and Wix Analytics would significantly increase Desirée's visibility into audience and search trends.

Student Consulting Team

Biplop Ghimire served as SEO and technical lead. He conducted the SEO markdown development, developed the phases for the SEO plan and implemented them, built the FAQ page, and supported other processes. [Information Systems, May 2027]

Joon Kwon served as integration lead and primary client liaison. He owned the Wix–Constant Contact integration and troubleshooting runbook. [Information Systems, May 2027]

Ryan Wang served as keyword strategy and project manager. He co-built the SEO Image Plan and co-built the two Gemini Gems. [Information Systems, May 2026]
